

Paweł Jarzembowski, PhD

I am a research and teaching assistant at the Department of Plant Biology in the Faculty of Biology and Animal Husbandry at the University of Environmental and Life Sciences in Wrocław. My research focuses on plant taxonomy, plant ecology, and the relationship between gall-inducing insects and their host plants. Additionally, I am involved in close-range remote sensing using unmanned aerial vehicles for plant and plant community phenotyping (vegetation indices, weed management, crop monitoring, object tracking). I have actively participated in several EU and national projects. Currently, I am working on close-range remote sensing techniques to estimate biomass growth.
