

Ewa Burszta-Adamiak, PhD, DSc, Assoc. Prof.

Research scientist and academic teacher at the Institute of Environmental Engineering, Wrocław University of Environmental and Life Sciences (UPWr), Poland

Her research area is related to sustainable stormwater management in urban areas, with particular attention to quantitative and qualitative aspects of functioning of green-blue infrastructure solutions (Nature-based Solutions), including hydrological performance assessment of green roofs and rain gardens, technical feasibility analysis of rainwater harvesting system and blue-green infrastructure for water quality management.

Research interest: assessing the effectiveness of bioretention systems for urban stormwater management, using digital tools to design stormwater management systems, investigating the influence of blue-green infrastructure on runoff quality.
